

NUF Test

Project..... Date.....

| Problem | New | Useful | Feasible | Total Score |
|---------|-----|--------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

First state the problem succinctly and then start to rank it based on;

- **Newness**; Has this been tackled before? If it is significantly different from previous approaches, then it can score higher.
- **Usefulness**; Is this worth tackling? Will it solve the problem? The more likely it will, the higher the score.
- **Feasibility**; Considering the effort required, is it feasible? Can it be solved? The less resource required, the higher the score.

Quickly rank each item out of 10 individually, coming together as a group to discuss and if required, re-score items if discussion opens previously unconsidered points.
